RHODODENDRONS

CHOICE HYBRIDS

EXOTIC SPECIES

H. L. LARSON

1132 NORTH 26TH STREET
TACOMA 3, WASHINGTON U. S. A.

TO OUR FRIENDS AND CUSTOMERS

It gives us a great deal of satisfaction in presenting to you this list of some of the rhododendrons growing in our garden. Since 1923 we have been collecting and growing the finest of rhododendrons available. From our varied collection of choice English hybrids and exotic species we invite you to select plants suitable to your individual preference and particular requirements.

NEW INTRODUCTIONS

For the first time we are offering two of our new rhododendrons:

R. Mrs. Horace Fogg has a huge truss of nine and ten flowers, each flower being $4\frac{1}{2}$ " to 5" across and $2\frac{1}{2}$ " deep. The color of the corolla is Neyron rose 623/2. The throat is crimson 22. The tips of the corolla are Neyron rose 631/1. The leaves are dark green, $2\frac{1}{4}$ " wide and 7" long.

R. Virginia Scott has a truss of eight flowers, each flower being $3\frac{1}{2}$ " across and $1\frac{1}{2}$ " deep. The color of the corolla is straw yellow 604/1. The buds are Mandarin red 17/2 fading to Chinese yellow 614/2. The foliage is dark green $6\frac{1}{4}$ " long and 3" wide.

The color descriptions of the plants are from the Royal Horticultural Society color chart. As to hardiness the plants survived the blizzard of 1950 during which period the temperature registered zero.

THE CULTIVATION OF RHODODENDRONS

SOIL: Rhododendrons will grow in practically any soil which does not contain lime, this being detrimental to them. A good fibrous loam with a liberal mixture of peat and compost will grow them to perfection. It is important that the soil be well drained as all rhododendrons dislike stagnation of the roots. At one time it was thought impossible to grow them without a rich peaty soil, but this idea has long been obsolete, as may be seen by many fine specimens growing in our garden.

SITUATION: Almost any position will suit them, providing that they are not in absolute shade. A cool moist position in partial shade is best. Generally speaking the larger the leaf of the plant the more shade should be given. This applies to the large leaf species such as Falconeri, Hodgsonii, sino-Grande and Macabeaenum, while the small leaf ones, especially the dwarfs with scaly and aromatic foliage, will stand exposure to the sun. Many beautiful varieties are eminently adapted to woodland planting and where thin woods are available, the grower has many advantages, as invariably the soil is ideal and there is no preparation necessary.

PLANTING: May be carried out from September to mid-June, providing the ground is in a good working condition. Do not plant too deep. Water well and mulch with decomposed leaves. After flowering it is important to remove all old blooms.

FERTILIZATION: Rhododendrons are no different than any other plants in regard to fertilization and care. In the early years of our nursery we tried many different fertilizers, even at times mixing our own. For the past ten years we have been using Carstens Rhododendron Fertilizer exclusively with the best results. The fine foliage and good condition of our plants show the results of the use of Carstens Rhododendron Fertilizer. Carstens Rhododendron Fertilizer can be purchased at your favorite garden store in convenient packages. This is a product of Carstens Packing Company, manufacturers of the organic based NuLife Lawn and Garden Fertilizer and Carstens Rose Fertilizer.

A Guide to Markings and Symbols Used in This Catalogue

The stars (**) preceding the names of the varieties listed indicate the relative garden merit accorded them by the Royal Horticultural Society in the degree of superlative excellence. Many fine varieties very often are not rated either because they are not readily found in the channels of trade, or because they are too new to have received recognition from the garden authorities; and among these are many rhododendrons of the highest order. In our opinion, all rhododendrons listed are of the finest quality and the fact that to some of them no stars are affixed does not in the least detract from their value as garden shrubs.

Aside from the value of the plants as garden shrubs, many varieties have been listed as to hardiness. Thus, you will find after the name a letter, such as A, B, C, D, E or F. A indicates a rock hardy plant which will stand full exposure to sun or cold; B, hardy but requires some shade to obtain best results; C, hardy in a sheltered position; D, requires a moderate amount of shelter; E, requires shelter in most favored gardens; and F, usually a greenhouse shrub. These indications apply to conditions in England, which are similar to this area west of the Cascade Mountains; and it should be borne in mind that while most rhododendrons will stand full sun if kept well watered, they thrive better in partial shade, and should never be planted up against a south or west side of house where they will receive not only the full effect of the sun but added reflection of bright light and heat from the building.

Where the letter R appears after a plant name, it indicates it is a shrub suitable for a rockery.

PRICE MARKING: The plants price marked are available this season. If you are interested in an unpriced plant and desire at this time to place your order, we will notify you as to price when the plant is available. Additional information may be obtained by writing directly to us.

NOTICE: Our listings are not revised each year. This is a reference catalogue which we would like to feel will find a place in your gardening library. We cordially invite your questions. Any inquiry directed to us will be given our immediate attention.

CHOICE HYBRID RHODODENDRONS

Size & Price

4-12" 12-18"

- **A. Bedford (B) lavender, dark eye
- A. C. Kendrick (B) lilac rose with red purple blotch
- *Adriaan Koster (B) creamy white, yellow center
- Aladdin (B) pink
- ***Albatross (C) white scented
- ***Albatross (C) Town Hill form (new)
- **Alice (B) deep pink fading to pale rose
- Amalfi—Cornubia x calophytum (new)
- Ambrose—Queen Wilhelmina x chaetomallum
- **Amy (B) bright red
- Androcles—early pink (new)
- Anita—pinkish-yellow
- Antonio—pink (new)
- **Argosy (B) white sweet scented
- Aries—deep blood crimson (new)
- *Armistice Day (B) blood red
- **Arthur Osborn (B) dark scarlet
- Arthur J. Ivens (B) pale pink
- astrocalyx (cross) (A) pink
- *Atrosanguineum (A) bright red
- Aucklandi x Earl of Athlone
- Augustenii—atroceraeum
- ***Avalanche (C) white (new)

- Ayah rose red
 ***Azor (B) salmon pink
 Azma—rose pink
 Babylon—(new)
 *Bagshot Ruby (B) blood crimson
 ***Barclayi var. Helen Fox (E) deep crimson-scarlet
 ****Barclayi var. Robert Fox (E) deep blood-red
 ***Beauty of Littleworth (B) white
 ***Betty Wormald (B) pink, pale purple center
 Beacon (B)—(new)
 Berry rose (B) deep orange, red in bud, salmon orange when open
 Berry rose var. Belvedere (B) soft apricot pink
 **Bibiani (B) scarlet (new)
 **Black Beauty (B) dark velvet crimson

EXOTIC SPECIES

- R. Aberconwayii—May, West China (new)
- ****R. Albrechtii (B) April, bright rose, 3-5 ft.,
Japan

- *R. *ambiguum* (A) May, yellow spotted green, to 5 ft., Japan
- **R. *anthopogon* (B) April, pink, Northern India, Tibet
- **R. *aperantum* (B) orange, 1/2-1 1/2 ft., Burma
- ***R. *apodectum* (A) rich crimson to dull orange to crimson, 4-8 ft., China
- ****R. *arboreum* (D) blood red, Himalaya
var. *Roseum*
var. *Album*
- **R. *argyrophyllum* (A) with silver leaves; white flushed rose, to 20 ft., China-Tibet
- **R. *arizelum* (C) with large leaves, white, cream or yellow flowers with dark crimson blotch, 10-20 ft.
- **R. *arizelum* (C) best yellow form, China-Burma-Tibet
- ****R. *Augustenii* (C) finest of the blue triflorums, shrub to 10 ft., China
var. *Azureum*
var. *Tower Court*
- ***R. *auriculatum* (B) sweet scented, white. July & August. Large shrub, to 15 ft., China
- *R. *auritum* (C) yellow touched with pink on lobes, shrub to 10 ft., April 1, South-east Tibet
- R. *Baileyi* (C) dark redish purple open flowers, shrub to 3 ft., late May, Tibet
- R. *Bakeri*—yellow to orange, 3-10 ft., July, South-east U.S.
- R. *Balfourianum* (B) pale rose flowers marked crimson, April 1, 4-8 ft., Tali Range, Yunnan
- ****R. *barbatum* (B) bright crimson scarlet flowers, March, 10-20 ft., Himalaya
- R. *bauhiniiflorum* (C) yellow flowers in May, shrubs to 8 ft., Manipur-Assam
- ***R. *Beaneanum* (B) crimson flowers, April, small shrub, Tibet, Burma, Seinghku and Delei valleys
- ***R. *Beaneanum* (B) pink flowers, April
- **R. *Beesianum* (C) white to rose flowers, shrub to 20 ft., upper Burma
- R. *brachycarpum* (A) creamy white flushed pink flowers, June, 6-10 ft., Japan
- ****R. *bullatum* (D) pink and white forms, large flowers, April and May, China
- *R. *Bureavii* (B) rose or redish flowers, April, good foliage plant, shrub to 6ft., China
- **R. *burmanicum* (F) greenish yellow or white flowers, April and May, Burma
- ***R. *caeruleum* (B) deep rose lavender or white flowers and olive markings, shrub 3-5 ft., May, Yunnan, Tali Shan
- **R. *calendulaceum* (A) yellow or orange to scarlet, 4-10 ft., May and June
- ***R. *callimorphum* (B) soft rose with crimson blotch, 4-9 ft., April-May, W. Yunnan, Salween Divide
- ***R. *calophytum* (B) large trusses, white or pink with blotch, 10-20 ft., May, W. Szechuan
- ***R. *calostrotum* (A) bright magenta purple, also rose, to 1 ft., May, North-east Burma
- ***R. *caloxanthum* (B) pale sulphur yellow tipped orange, also orange form, 3-5 ft., April, Burma

- R. campanulatum* (B) various shades white
rosy white, rose purple and almost blue,
April, Himalaya
var. *Knaphill*
- R. Campbelliae* (C) purplish-rose, 6-10 ft.,
India
- *****R. campylocarpum* (B) canary yellow, 4-8
ft., April-May, Himalaya
var. *elatum*
- R. camtschaticum* (A) reddish-purple, 6
inches, May, N.E. Asia, N.W. America
- R. cardiobasis* white or rose, shrub to 10 ft.,
China
- ****R. catacosmum* (B) crimson-rose flowers, 6-
9 ft., April, Tibet
- ****R. cerasinum* (C) cherry red, bright scarlet,
or creamy white with cherry red band
around corolla, 6-10 ft., April, Tibet
- *****R. chaetomallum* (C) deep crimson flowers,
2-3 ft., March, Tibet-China
var. *xanthanthum* (C) creamy yellow,
flushed pink
- ***R. chameunum* (A) deep purple rose flowers,
small shrub, June, China
- ***R. chartophyllum* (B) mauve, to 6 ft., May,
Yunnan
var. *praecox*
- ****R. chasmanthoides* (C) rose lavender, May,
8 ft., China-Tibet
- *****R. chasmanthum* (C) deep lavender mauve,
May, 8 ft., China-Tibet
- R. chrysanthum* (B) pale yellow flowers
about 1 ft., China
- ****R. ciliatum* (C) best form, rose flowers,
April, 3-6 ft., Himalaya
var. *Bergei*
- ****R. cilicalyx* (F) sweet scented white or rose
flowers, April, to 10 ft., China
- *****R. cinnabarinum* (B) May and June, to 6 ft.
Himalaya
var. *blandfordiae*florum—yellow
flushed red at base
var. *Roylei*—intense rosy red
- *****R. cinnamomeum* (C) white to pale rose,
May, India
- **R. Clementinae* (B) creamy white flushed
rose, 4-6 ft., China
- ****R. concatenans* (C) apricot tinged purple,
April, May, to 6 ft., Tibet
- ****R. crassum* (D) white sweet scented flowers,
June, to 20 ft., China
- *****R. crebreflorum* (C) pale pink, April, prostrate
shrub, China
- R. cremastum* (A) rose purple, April, small
shrub, western Yunnan
- ****R. croceum* (C) yellow flowers, May, small
tree, China
- **R. cuneatum* (A) deep rose flowers, April,
shrub to 4 ft., China
- ***R. cyanocarpum* (C) white to rose, April, 5
ft., China
- ***R. cyclium* (B) deep rose, May, 4-6 ft.,
China
- ****R. Dalhousiae* (F) large tubular flowers
white flushed pink, 6-10 ft., Himalaya
- R. Davidii*—rosy red to lilac flowers, to 12
ft., Yunnan
- ****R. Davidsonianum* (B) pink flower with red
spots, April and May, to 6 ft., China

- **R. decorum (C) pink to white, March to May, 12 ft., China
- ***R. deleiense (C) deep magenta rose, 2 ft., Delei Valley Assam
- R. detonsum (B) rose pink flowers, to 9 ft., Yunnan Sung-Kwei Divide
- **R. diaprepes (D) white flushed rose, July 10 ft., China-Burma
- ***R. dichroanthum (B) deep orange to salmon pink, May and June, to 6 ft., China
var. Prince of Wales
- **R. didymum (B) deep black crimson, June and July, 2-3 ft., Tibet
- **R. diphrocalyx (C) rosy crimson, April, 5-15 ft., China
- ***R. discolor (B) white and pink forms, July, shrub to 20 ft., China
- R. dolerum (C) white to rose, South-western Szechuan
- ****R. Elliottii K.W. 7725 (C) crimson-scarlet, also rose-purple form, June, India

- **Magnifica—creamy white flushed pink
- **Mrs. G. Van Noordt—salmon pink
- Nicolas Beets—deep orange
- Phidias—cream flushed orange
- *Raphael de Smet—white shaded rose

Visitors are always welcome at the nursery where there are rhododendrons in flower from late February to August. We have used a number of the finest of rhododendrons as parent plants for hybridizing. As a result of our hybridizing we now have approximately 500 crosses in various stages of growth from which in the near future we will endeavor to introduce many new and fine rhododendrons to our friends and customers.

We are members of the Royal Horticultural Society, London, England. We are also members of the Tacoma Rhododendron Society, which is affiliated with the Royal Horticultural Society, England and the American Horticultural Society, Washington, D. C.

TERMS

All plants are offered subject to being unsold on receipt of order. Cash must accompany all orders.

Packing is free and all plants are boxed in plywood containers. Plants will be forwarded by Railway Express unless otherwise instructed. Our responsibility ceases when plants are shipped.

We take every precaution when packing to minimize the danger of damage to the plants and cannot be responsible for delay, damage or loss of plants in transit.

4-5-52

There are very few insect pests to attack rhododendrons in Western Washington. The Rhododendron Lace-Bug, Rhododendron White Fly and Black Vine Weevil make their appearance at times. Of these insects the Black Vine Weevil is the most serious, the grubs feeding on the roots and finally girdling the stem just below the ground. The chewing of the roots and girdling of the stem is done in the spring, usually in April. We recommend the soil treatment at that time with Carco-X, one teaspoon to one quart of water. Another treatment should be given in September to control any stray insects or larvae that may be in the soil. It is quite hard to detect these insects under the ground. However, the adult beetles will chew the edges of the leaves and this should indicate their presence. A mixture of 1 to 250 will control Aphis and other such insects.

We have found that Carco-X is the most economical spray obtainable and have had good results with it for a number of years.

FERTILIZATION: Rhododendrons are no different than any other plants in regard to fertilization and care. In the early years of our nursery we tried many different fertilizers, even at times mixing our own. For the past ten years we have been using Carstens Rhododendron Fertilizer exclusively with the best results. The fine foliage and good condition of our plants show the results of the use of Carstens Rhododendron Fertilizer. Carstens Rhododendron Fertilizer can be purchased at your favorite garden store in convenient packages. This is a product of Carstens Packing Company, manufacturers of the organic based NuLife Lawn and Garden Fertilizer and Carstens Rose Fertilizer.
